## Jardins de lamitié internationale Soroptimist

A Riparian Zone is an area along a waterway that is flourishing with plant life. These important areas are used by waterfowl, small mammals, insects, and shore birds for nesting, habitat, feeding and hiding from predators. It's like a game of hide and seek! The more riparian zones along waterways the more healthy that water ecosystem will be.

La zone riveraine est une zone située le long d'une étendue d'eau où des plantes s'épanouissent. Ces endroits importants sont utiles aux oiseaux aquatiques, petits mammifères, insectes, et oiseaux côtiers pour y nicher, habiter, se nourrir et se cacher des prédateurs. C'est comme jouer à cache-cache. Plus il y a de zones riveraines, plus l'écosystème aquatique est sain.

WHEN I VISITED, THE MOON WAS:

Like wildlife in a riparian zone, where would you choose to hide from a predator?

**Clue:** If you want to find the post, include the Netherlands on your tour!
