

Lake Tamblyn (Near canon)

Lac Tamblyn (Près du canon)

These trees have been planted individually so we can see and learn what the tree looks like when it isn't challenged. This is called an arboretum; a public space to learn how trees grow; and what makes them unique. A forest is a great place to see how trees grow together; in a community.

Ces arbres ont été plantés individuellement afin de pouvoir voir et en apprendre davantage sur leur apparence lorsqu'ils ne font face à aucun défi. Cela s'appelle un arboretum; un espace public où on en apprend davantage sur la manière dont les arbres poussent et ce qui les rend uniques. Une forêt est l'endroit idéal pour voir comment les arbres poussent ensemble dans une communauté.

post-artwork by Brittany Kennedy

WHEN I VISITED, THE MOON WAS:

The arboretum is the group of trees you will see north of the post. Many look a lot alike but one that is very different is the larch. Can you find it? (Hint: some trees have signs to identify them)
What is different about this tree?

Clue: Walk around Lake Tamblyn to the north east (from the parking lot, that is to the right) until you get to the last set of stairs. Go up to find the post.
